Experience

Manusis4

Fullstack Software Developer

 Jun 2021 - Present

 Remote, Curitiba, Paraná - Brazil

Multitenant asset management system made in Rails, used by clients such as Burger King, Honda, and Shopee to manage assets, maintenance routines, and operational workflow

- Assisted in migrating multiple modules from a legacy ExtJS system to React, improving maintainability and modernizing the frontend.
Stack: ExtJS, React
- Responsible for maintaining, updating, and providing support for an IoT tracking and routing system built with Angular 4 and Node.js, hosted on AWS.
Stack: Angular 4, Node.js, AWS
- Assisted in migrating the project from Rails 5 to 6, and later from Rails 6 to 7, contributing to bug fixes, code reviews, and test adjustments.
Stack: Ruby on Rails, RSpec/Minitest, Git
- Refactored a project management module, implementing full test coverage with Minitest and improving Gantt chart data retrieval and saving performance by 50% while still using the same relational database, avoiding tech and data migrations. Refactored the code, moving high demanding tasks to Sidekiq.
Stack: Ruby on Rails, PostgreSQL, ExtJS, React, Sidekiq
- Joined the evolution team and migrated API from v1 to v2 using JSONAPI::Serializer (Netflix fork) to improve response times, achieving a ~30% faster response.
Stack: Ruby on Rails, JSONAPI::Serializer
- Assigned to the maintenance team, responsible for fixing client-reported bugs while ensuring code quality, maintaining test coverage above 70%, and passing CI pipelines for all pull requests.
Stack: Ruby on Rails, RSpec/Minitest, Git, CI/CD

UFRJ – Universidade Federal do Rio de Janeiro

Fullstack Software Developer

 Sep 2012 - Jun 2021

 Hybrid, Rio de Janeiro, Rio de Janeiro - Brazil

Worked on the university's technical team, handling generalist tasks ranging from project analysis and client meetings for requirements gathering to application development and deployment.

- Deployed applications using open-source container management platforms like Portainer and private Docker image hubs with Harbor.
Stack: Docker, Portainer, Harbor (goharbor.io)
- Developed a system for mass integration with the government EFD-Reinf system, enabling the entire university to manage their tax obligations more efficiently.
Stack: Laravel, Vue3, InertiaJS, Postgres, Docker
- Led and developed an exchange program system, managing the entire exchange process between UFRJ and partner universities.
Stack: Laravel, AngularJS
- Developed a language course management system using Laravel and Vue.js, handling course creation, student enrollment, and class scheduling for the College of Letters..
Stack: Laravel, Vue, PHP
- Implemented CAS authentication using rbCAS and CASino to provide a centralized login solution.
Stack: Ruby, rbCAS, CASino, Ruby

- Developed a public exam-based admission system for new employees, including modules for registration, candidate allocation by room, and results evaluation.
Stack: PHP, Zend Framework

Listus S.A

Junior Fullstack Software Developer

📅 Jul 2012 - Sep 2012

📍 On-site, Rio de Janeiro, Rio de Janeiro - Brazil

Gift list startup built with Rails, where API integration and development were the main areas of learning and contribution.

- Developed the corporate module for a gift list management system, retrieving products via API and making them available as gift list items.
Stack: Ruby on Rails, Sass, HTML, JavaScript, JQuery

Infoidéias

Trainee Developer

📅 Nov 2011 - Jul 2012

📍 On-site, Rio de Janeiro, Rio de Janeiro - Brazil

Worked on a real estate platform built with ASP 2.0, providing maintenance and developing specific new features as needed.

- Provided user support and maintained functionality of a multitenant real estate platform built with ASP.
Stack: ASP2.0, PHP, Multitenancy
